

Project # 1: Are-We-Out-Of-The-Pandemic-Yet? Pics

INTRODUCTION

For our next set of tasks (I call them “projects”), we will be getting back to shooting images (be it from your phone, point and shoot or DSLR). As a refresher, here’s a number of things you need to keep in mind: **Focal Lengths, Aperture, and Shutter Speed.**

As far as image processing is concerned (B&W, Selective Colour, Muted Colours, Sepia, and Cross-Process), you are to use either **Photoshop** or **Photopea** and follow the theme instructions carefully. For more detailed info on the project, please click [here](#).

Because I always watch some professional photographer shoot some reflection of skyscraper on water, It is pretty cool, so I just try to mix the Low Angle and the reflection together, I didn't expect such a good effect.

Just a low angle to
take this photo

you can free from all restraints or live free is a personal freedom it is everyone wants everyday.

Everyone can take off their mask to talk or relax, it is a Personal Freedom and i used Muted Colours to finish this photo

Sometimes it is not what we include in the photograph, rather what we leave out. just like my photo, maybe you will focus in the sky and trees, but my subject of the photograph is the gantry frame

Sometimes it is not what we include in the photograph, rather what we leave out. just like my photo, maybe you will focus on the road and trees, but my subject of the photograph is the car

This image was shoot at project one , I just random take some photos, I don't know this is a subframing at that moment , but fortunately I didn't delete the image

This angle is a door I shoot outside of a classroom, because I refer some example of internet, they use 2 wall to be a peripheral. so I try to take this photo.

I waited in the street for a long time, just for this photo, I moved the camera while took pictures to make this motion.

I waited in the street for a long time, just for this photo, I moved the camera while took pictures to make this motion.
